- c. Modified 55 Day, 16mm Maritime Sequence Camera -- An operational critique was forwarded Headquarters in reference C in which Chief, KURIOT was an info-addressee. In addition to the referenced critique we would like to add that based upon our past experience, the ideal characteristics of an operational camera would be: A 35mm camera completely stripped of all unnecessary accessories; kept to minimum dimensions yet readily adaptable to various lenses and load capacities; capable of being successfully operated by a rank amateur; and last and foremost, an absolutely silent shutter. Of course we are aware that such a camera would necessarily have to be engineered from "scratch" and would demand considerable time, planning and imagination.
